

STUDENT INTERNSHIP
PROGRAM

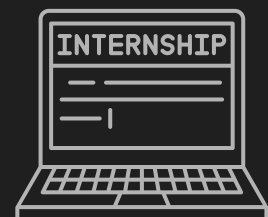

PROJECT 3

PRT362S

T1 INDIVIDUAL

Group RB3

22 MARCH 2026

PREPARED BY:

Njanyana Xaba [223056359]

ROLE: PRODUCT OWNER

Cape Peninsula
University of Technology

TERM 1 INDIVIDUAL SUBMISSION: PROJECT 3

1. MY ROLE IN THE GROUP

As the Product Owner, I am the bridge between the user needs and the development team. My main job is to define the project vision and manage the product backlog. I make sure the team builds features that actually add value to the Student Internship Program. I am responsible for final decisions on system functionality and requirement priority.

2. ALLOCATED TASKS AND PROGRESS

My tasks for Term 1 focused on the conceptual foundation of the project.

Tasks Completed

1. **Role Allocation:** I analysed the skills of all six members to assign roles that match their natural strengths.
2. **Functional Requirements:** I drafted the core requirements for user authentication and profile management.
3. **Scope Definition:** I defined the boundaries of the project to ensure we remain within the third year curriculum standards.
4. **Professional Development:** I have completed my required upskilling courses to better support the group.

Outstanding Tasks

1. **User Story Documentation:** I need to translate the functional requirements into detailed user stories for the developers.
2. **Prototype Review:** I will need to verify that the Term 2 wireframes align with my product vision.

3. INTEGRATION INTO THE MAIN PROJECT

My work provides the roadmap for the entire group. By defining the roles and requirements early, I have ensured that the developers know exactly what to code. This prevents the team from wasting time on features that are outside our project scope. My plan of action is to monitor the backlog as we move into the development phase.

4. SUGGESTED IMPROVEMENTS

For the Group We need a more visual way to track our progress. I suggest we move from only using WhatsApp to a simple digital board. This will make it easier to see which tasks are outstanding at a glance.

For Myself I want to improve my technical knowledge of MySQL. Even though I do not do the primary coding, a better understanding of the database will help me write more realistic technical requirements for the team.

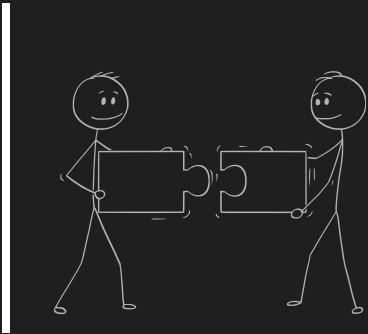

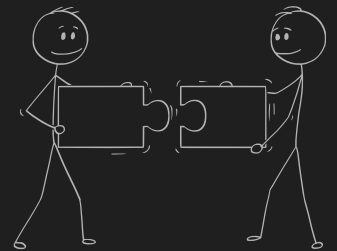

5. PROOF OF UPSKILLING

The following LinkedIn Learning courses have been completed to aid the development of the application.

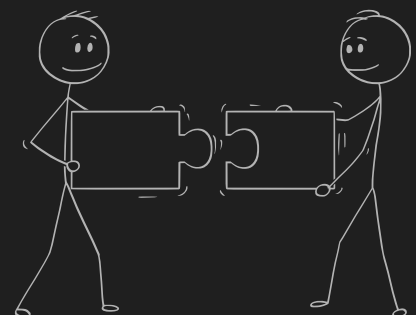

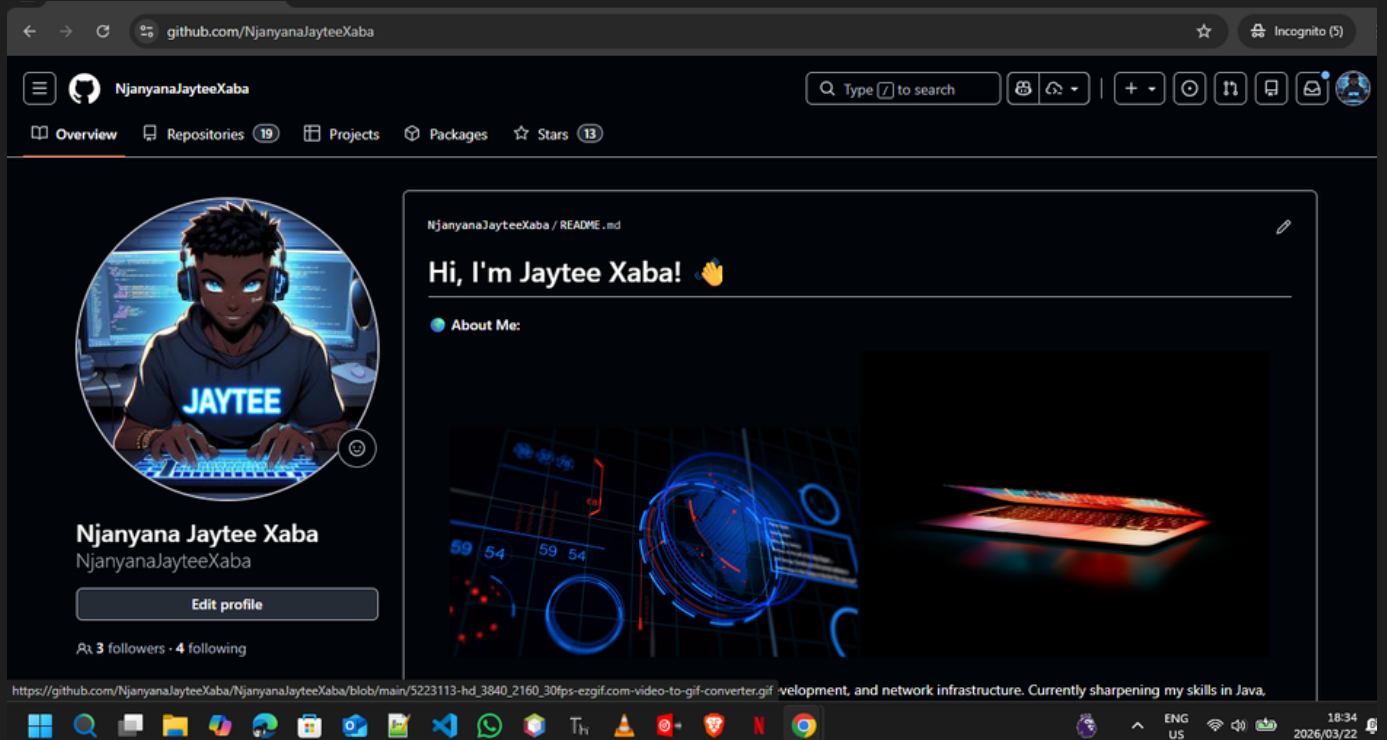

Dream Teams: Focuses on group motivation and collaboration strategies
